**1-1/2 INCH SCALE
LEVEL II SPECIFICATIONS SUMMARY**

**RIDING CARS, PASSENGER CARS,
TENDERS AND CABOOSES**

CAR/TENDER/CABOOSE REQUIREMENTS

SEATS

Front top of seat shall be no more than 10 inches above car floor for passenger cars; 16 inches for cabooses. No requirement for engineer's seat. Passenger seats on engineer's riding car must be less than 10 inches above the floor. Only engineer's seat may swivel. All seats must be securely restrained.

TRUCKS

Each truck wheel lifts 1/8 inch off the rail without raising any other wheel.

When a truck side bearing is pressed against a car side bearing, the gap between the opposite side bearings is not less than 1/100 inch and no greater than 3/32 inch (king pin seats are in contact). Riding on functional rollers is also acceptable.

Bolster bolt nut or other retaining device to have a minimum gap of 1/8 inch from the bolster.

Trucks rotate at least +/-5 degrees from the centerline.

Car passes successfully the LALS RM Wheel/Truck Gauge or hand held inspection gauges. Flange height shall not exceed 0.22 inches.

COUPLERS

Center height shall be 4-3/8 inch +/- 3/16 inch with car unloaded, and able to rotate +/-7 degrees from the centerline. Coupler not required on the end of a caboose.

SAFETY CHAINS

Fittings and attachment hardware must be rated for a 500 lb. minimum load. Safety chains are required between equipment unless drawbars are used or equipment has automatic fail-safe brakes. The safety chain must be configured in such a manner that the free end clears the top of the railhead. No safety chain required on rear of caboose or riding car that is not pulling any cars.

LOCOMOTIVE REQUIREMENTS

GENERAL

Engine braking system is present and able to slow and stop the entire train within a safe distance. Hydraulic drive diesels are considered to have brakes if the train is braked by putting the hydraulic system in reverse. Electric locomotives with dynamic braking also meet this requirement.

Whistle, horn, or sounding device functions for sounding locomotive signals.

Center height shall be 4-3/8 inch +/- 3/16 inch with car unloaded and able to rotate +/-7 degrees from the centerline. Coupler not required on the front of an engine.

Locomotive wheels pass successfully the LALSRM Wheel/Truck Gauge or hand held inspection gauges. Flange height shall not exceed 0.22 inches. Each wheel, trucks and drivers, lifts 1/8 inch off the rail without raising any other wheel.

Locomotive safety chains, fittings, and attachment hardware must be rated for a 500 lb. minimum load. The safety chain must be configured in such a manner that the free end clears the top of the railhead. Safety chains are not required if drawbars are used. No safety chain or couplers required on front of locomotive.

STEAM SPECIFIC

Boiler test and certification will not expire within 30 days or less.

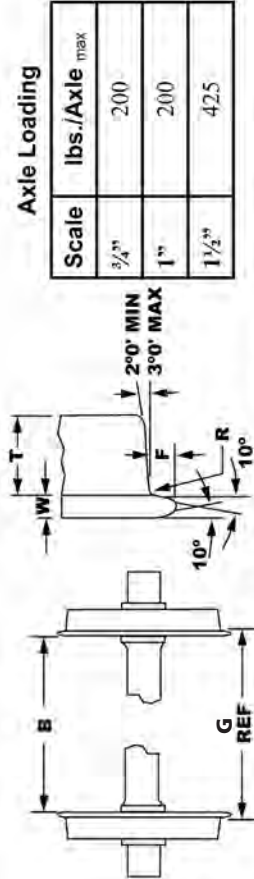

Two methods of putting water into the boiler. One method works without motion of the locomotive on the track.

Ash pan in condition to not allow the dropping of burning ashes or fuel on the track.

INTERNAL COMBUSTION SPECIFIC

Fuel shutoff valve is in line with fuel tank and carburetor and accessible with locomotive cover in normal position. Applies to locomotives with internal combustion engines where the top of the fuel tank is level with or above the bottom of the carburetor.
